Project Organizations

The right organization for international projects

International project organizations are faced with different stakeholders and many risks: political, economic, socio-cultural, technological, legal and perhaps even ecological risks. Risk prevention has an important status. Team dynamics have a strong effect on projects.

Critical success factors are the international orientation of the structural and procedural organization as well as communication and cooperation.

"How can my organization cope with the challenges of international projects? What should the design be in order to cope with the different interests and risks in international projects? What are the experiences so far and what are the success factors?"

In the last 3 decades we have seen many international projects in different industries and countries as well as many examples of good and bad practice. This experience helps us to design your project organization together with you.

The basis for your international project organization

We are glad to support your project organization development process by designing and implementing this together with you:

Strategic and operative responsibilities in international projects

Effective and efficient coordination of international projects

Structures and leadership of international project teams

Cooperation mechanisms for global project teams

Implementing a global project management office

Benefit from our experience

You need to be able to benefit from experience in different projects, organizations, industries, and countries in order to be able to cope with permanent changes of project organizations. We bring our experience to bear in your organization and consult you objectively.
